PROFESSIONAL SUMMARY

Director of Technology running IT and security as separate functions for mid-market companies being bought, sold, and merged. Built a first IT organization and its security program, led sell-side IT due diligence through a sale to a public acquirer, then integrated three buy-side deals: four Microsoft 365 tenants into one (600 users, 13 sites), with endpoint, SIEM, and DLP standardized on the Microsoft security stack.

EXPERIENCE

Director of Technology

March 2023 – Present

DecisionPoint Technologies, Greensboro, NC

- Unified identity, network, and endpoint architecture across three buy-side transactions: four Microsoft 365 tenant-to-tenant migrations into one tenant (600 users, 13 sites), Intune device management, and roughly 400 SentinelOne and Bitdefender GravityZone agents retired into Microsoft Defender under MSSP monitoring.
- Took ownership of an inherited AWS environment and retired its Sage 100 and Active Directory implementations; drove fuller E5 utilization with Privileged Identity Management, Purview DLP, Defender, and Sentinel SIEM.
- Delivered sanctioned AI: a Microsoft 365 Copilot reference implementation and a baseline-secured Claude Code Team plan, with personal AI accounts blocked to eliminate shadow-AI data exposure and constrain agentic misuse.

Director of Technology

January 2021 – March 2023

Macro Integration Services, Greensboro, NC

- Built the company's first internal IT function as the organization doubled in headcount, combining W-2 staff and vendor partners into a single Freshservice-based ITSM practice with defined ownership between IT and operations.
- Designed and delivered technology for a new 160,000-square-foot headquarters, consolidating three closed locations into a single facility. Architected a 40,000-square-foot customer staging environment with per-customer network isolation preventing interaction between client environments, then extended it to a separately access-controlled colocation space for customer on-premises equipment.
- Stood up the company's security program: Bitdefender GravityZone for endpoint protection and patching, Microsoft Sentinel for SIEM with custom incident alerting built on the integration between them, and KnowBe4 awareness training with simulated phishing across all staff.
- Led sell-side IT due diligence through the company's successful sale.

Director of Enterprise Applications

January 2019 – January 2021

Macro Integration Services, Greensboro, NC

- Eliminated the company's on-premises server footprint with a migration of identities to Microsoft Entra and a migration of workloads to Azure. Enforced organization-wide multi-factor authentication.
- Built Microsoft Power BI reporting using IFS Field Service Management and multiple SaaS data sources, creating a unified customer-facing dashboard and reporting environment covering service and deployment operations.
- Designed and wrote bidirectional integrations connecting IFS Field Service Management to two customer ServiceNow platforms, Field Nation, and QuickBooks, carrying 100% of organizational invoice volume.

SKILLS

Leadership & Governance: M&A integration and due diligence, ITSM, vendor/MSSP management, security programs, AI governance

Cloud & Identity: Entra ID, Intune, Privileged Identity Management, Conditional Access, Azure, AWS

Security Operations: Microsoft Defender for Endpoint, Defender for Cloud, Microsoft Sentinel, Purview DLP, KnowBe4

EDUCATION

A.S. in Network Security, ECPI University
